----------------------------WELCOME TO BOOKLAND REPORT SYSTEM-----------------------

Here is some information of the system for the help of the user.

This system is for recording the book information of BookLand store.There are altogether five pages in this system, they are given below:

- **Home page:** Here, the user can find the overview of the whole system. User can directly exit through this page by just clicking the button "Exit System".

- **Add Books Page:** In this page, the user can add the books in the system. All the information of books like BookID, category, Name, Author, Edition, and price of book are stored here. User should fill all the required book information and then click the add button to store the book information in the system. User can directly return to the home page through this page by just clicking the button "Return Home".

- **Search Page:** In this page, the user can search the required book on the basis of price and category of the book. Just like previous page, user can directly return to the home page through this page by just clicking the button "Return Home".

- **Update Books Page:** In this page, the user can update the book information. At first, the user should fill all the required information of the book to be update and then click update button to update the book information. User can clear the book information too by clicking the clear button. User can directly return to the home page through this page by just clicking the button "Return Home".

- **Delete Books:** In this page, the user can delete the book record. The user should click the row of the book whose record is to be deleted and then should click the delete button to delete the book record. There is another button in this page which is Drop button. It is used to drop the whole table. Like previous here also, user can directly return to the home page through this page by just clicking the button "Return Home".
